

Roof-Mounted Air Conditioning Systems

Cooling Capacity from 11 to 14 kW Ideal climate control for minibuses

This new generation of roof-mounted air conditioning systems is designed specifically for minibuses with 15 to 20 passenger seats. The units ensure reliable performance in all driving conditions, while high-quality components guarantee long service life and operational safety.

The systems feature a compact, aerodynamic design and are engineered for easy installation and fast servicing, thanks to excellent access to replaceable components. Control elements are available in both manual and automatic versions, allowing the system to be tailored to individual vehicle requirements.

An advanced electronic control unit enables extended diagnostics and precise system management. A wide range of accessories is available, including air distribution ducts and installation kits, ensuring flexible integration into various vehicle layouts.

An optional heating function further enhances passenger comfort, while the air conditioning connections can be painted to match the vehicle body color, maintaining a clean and cohesive exterior appearance.

Key Benefits:

- Cooling capacity from 11 to 14 kW
- Compact, aerodynamic roof-mounted design
- High energy efficiency with innovative technology
- Reliable, high-quality components from proven series production
- Continuous fresh air supply for superior passenger comfort
- Optional heating function
- Easy installation and low maintenance costs
